

## ***Care and Maintenance of your Synthetic Lawn***

- Clean loose debris from lawn surface using leaf blower (on low setting), broom or rake.
- Clean/ vacuum area where debris builds up. This normally is around the edges.
- Wash down the lawn periodically with a hose and water to help clean the dust and flush out any urine or spills. (Weekly for lawn with dogs)
- To keep fibers upright, periodically (at least monthly) brush the fibers with a stiff broom. This will be needed more frequently in the high traffic locals. Rubber or sand in fill may be needed occasionally.
- For hard stains such as animal droppings, mildew or spills ,use
  - One part household bleach to three parts water
  - Clean the area well
  - Rinse the area with a spray nozzle and hose
  - For stubborn odors, use half & half- water and baking soda
- For hard water stains spray area with 50/50 water and vinegar and rinse with clean water
- Keep any kind of flame (cigarettes, grills, fireworks, etc) away from the turf. As well as glass that may magnify the sun light and burn the turf.
